

One field is genuinely won; three are a trade-off; one is lost

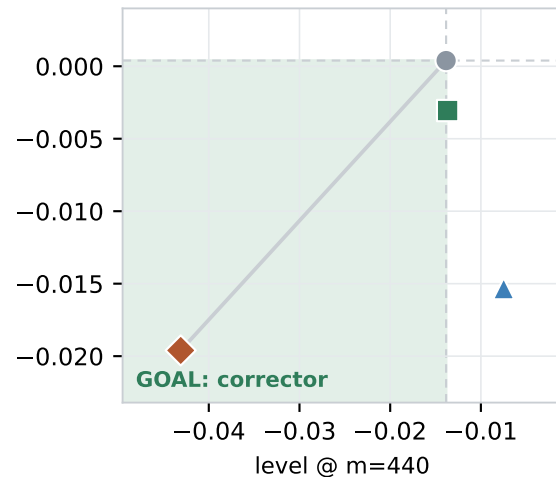

Shaded box = BOTH coordinates below the draft's, which is the goal. `direction` has the corrector inside it; `event\_type`, `price\_rel` and `size` only trade one for the other; on `log10\_dt` the pure CORRECTOR loses both (the keep-tau arms sit on it)

● draft ■ tau 0.01 ▲ tau 0.1 ◆ corrector

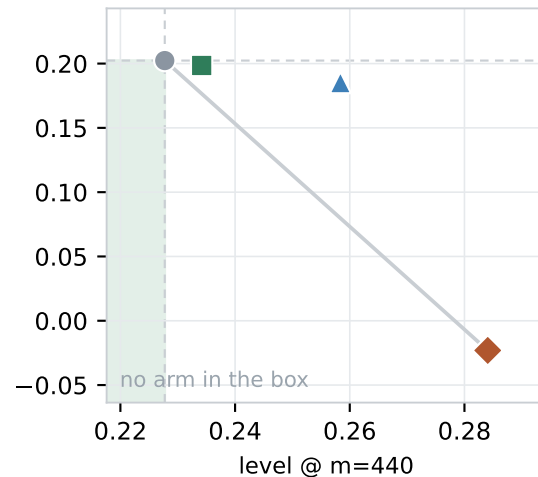

event_type

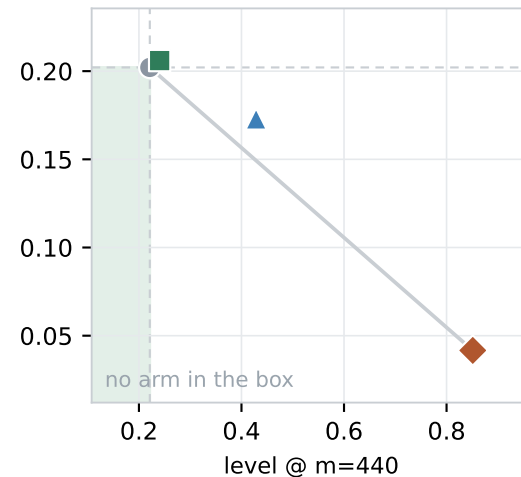

direction

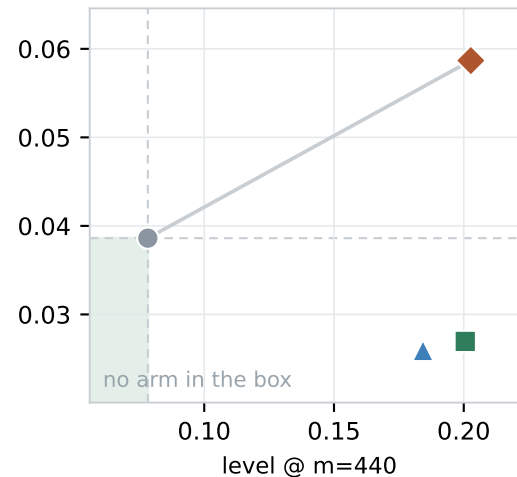

price_rel

size

log10_dt

60-ticker sweep, same checkpoint lg488b_g2, 2026-01 held out. Grey line joins the draft to the pure corrector; keep-tau arms sit on it.
