

33 training-loss job histories: failed → resume segments in the same subplot — log-x supplement

300-DPI composite • raw W&B step_loss + within-segment rolling median • 54 observed physical segments / 10,403 raw points • 6M cross-seed checkpoint ancestry is explicitly marked • x-axis=log

all raw loss points final observed segment crashed pre-resume interrupted then resumed resume handoff/start intended target step zero-data attempt (ribbon)

Overview: all 54 physical loss segments (log-x; per-segment rolling median; no solid cross-job joins)
